

Experts for Inventor/ERP Integration

Experience from Successful Projects

When it comes to linking Inventor to your ERP system, you should put your trust in a systems trader with experience and expertise. We have been successfully implementing projects for over 20 years, whereby we take responsibility for our actions and focus on standard products instead of customization for ERP integration.

Vault specialists

The entegra ERP-Connector utilizes Vault Professional and works in accordance with the Vault philosophy.

We possess sound, comprehensive knowledge about the implementation, application, and management of Vault. We performed our first Vault implementation in 2005. Over 200 of our clients now work with Autodesk Vault.

entegra Vault Tools

We have been developing effective add-on products for Autodesk Vault since 2009. We are able to resolve tasks that recur in different projects using standard products instead of customization. In the context of ERP integration, for example, automated creation of PDF files upon approval is often included.

Project experience

We implemented our first CAD/ERP integration back 1997, which was a tailored development project on SAP R/3 back then. As of 2012, we now perform our ERP integrations via our ERP-neutral entegra Vault ERP-Connector.

Process knowledge

Many of our clients have a very specific idea of how an ERP integration should look.

We do, too!

Make the most of our experience and let us find the ideal process for your ERP integration together.

Implemented solutions

We have already implemented interfaces to the following systems with our product: abas ERP, ams.erp, AvERP, avista.ERP, canias ERP, eEvolution, IFS Applications, infor, Isah ERP, proALPHA, PSIpenta, Microsoft Dynamics NAV, sage, SAP Business One, SAP ERP, SAP R/3, SIVAS.ERP and SYSPRO, as well as company-specific ERP systems.

And all with the same product, the entegra Vault ERP connector.

Effective support

Our wealth of knowledge about Vault and ERP interfaces is widespread across the company, not limited to a few individuals. We employ numerous specialists for the application of Inventor\Vault\ERP and the underlying database technology. Fast response times and quick aid are guaranteed.
