

Integration of Inventor into your ERP System

entegra Vault ERP-Connector

The entegra Vault ERP-Connector is the ERP-neutral interface between Inventor and your ERP system.

The interface integrates articles, bills of materials and documents, as well as projects and orders between Inventor/Vault and your ERP. Multiple manual entries are avoided, the consistency between design and ERP is established, and the quality of your data and processes is improved.

Technology

The interface builds on Vault Professional. Vault assumes the management of CAD data while the ERP-Connector communicates with the ERP system. The Connector is adapted to your needs through an XML configuration.

Scope of services of the interface:

Articles

- Creation of new Vault articles from the ERP system
- Creation of new ERP articles from Vault
- Bidirectional updating of the articles
- Management of semi-finished products

Bills of materials

- Transfer of CAD bills of materials including item numbers
- Updating of bills of materials

Documents

- Transfer of documents (CAD and neutral formats)
- Transfer of design status
- Transfer of Vault weblinks

Projects/orders

- Bidirectional alignment of orders from the ERP system with Vault projects
- Transfer of project status
- Transfer of all project documents

Selection lists

- Adoption of selection lists from ERP
- Identical term catalogs

Your benefits

- Save time
- Improve quality
- Optimize processes

Product instead of customizing

The Vault/ERP-Connector is a standard product and is continuously developed and adapted to new Inventor/Vault versions as part of the software maintenance.

Experience

We have already implemented integrations on the following systems with our ERP-neutral interface:

abas ERP, ams.erp, AvERP, avista.ERP, canias ERP, eEvolution, IFS Applications, infor, Isah ERP, proALPHA, PSIpenta, Microsoft Dynamics NAV, sage, SAP Business One, SAP ERP, SAP R/3, SIVAS.ERP and SYSPRO.

The 'entegra' logo is displayed in a blue, italicized font.
